

Booking Module Design Specification

Objective

Manage the complete lifecycle of a water booking from creation to payment completion.

Workflow

Customer → Create Booking → Assign Driver & Vehicle → Delivery Completed → Payment Collection → Reports

Booking Status

CONFIRMED → ASSIGNED → DELIVERED. Additional status: CANCELLED.

Payment Status

PENDING, PAID

Collection Methods

Driver Collection: Driver collects cash and submits later.

Account Collection: Customer pays directly to company account (UPI/GPay/Bank).

Office Collection: Office collects weekly/monthly.

Create Booking

Search Customer, Address(auto), Capacity(editable), Price(editable), Booking Date(today/editable), Notes.

Business Rules

Customer selection auto-fills Address, Capacity and Price. Capacity & Price remain editable.

Booking stores a snapshot of customer details.

Primary Actions

Confirmed → Assign

Assigned → Complete Delivery

Delivered → View Details

Assign Dialog

Select Vehicle, Driver and Notes. Saving changes the status to ASSIGNED.

Complete Delivery

Choose Driver Collection / Account Collection / Office Collection. Driver & Office Collection keep Payment=PENDING until office confirms receipt. Account Collection marks Payment=PAID.

View Booking

Shows booking, customer, vehicle, driver, payment, timeline and receipt.

Booking Model

bookingNumber, customerId, customerName, phone, address, capacity, price, bookingDate, status, paymentStatus, collectionMethod, vehicleId, vehicleNumber, driverId, driverName, notes, createdAt, updatedAt.

Dashboard

Today's Bookings, Pending Assignments, Deliveries, Pending Payments, Driver Collections, Office Collections, Account Collections.

Reports

Booking, Collection, Pending Payments, Driver Collection, Vehicle, Daily Delivery, Customer Outstanding.

UI

Responsive desktop/tablet/mobile, reusable DataTable, dialogs, searchable customer selector, status badges, confirmation dialogs.
